### **New report highlights outbreak data across the state.**

DOH released a [new report](#) today -that helps illustrate which types of businesses and facilities experience the most COVID-19 outbreak activity. These state-level data are aggregated from all counties that report data to DOH, and the report contains both healthcare and non-healthcare related data. These outbreak data are not collected by DOH directly. Local health jurisdictions (LHJ) use information from case interviews and other means, such as voluntarily reports from businesses and facilities, to identify clusters of cases. If an LHJ confirms an outbreak, they report it to DOH.

### **Inslee Extends Two Proclamations Related to COVID-19.**

Gov. Jay Inslee today announced the extension of two proclamations in response to the continuing COVID-19 pandemic. The extensions were approved by the Legislature in a July 30 [letter](#). Both proclamations are extended to September 1, 2020.

Garnishments - [20-49.7](#) – Protects CARES Act stimulus payments, as well as state and federal unemployment payments, from bank account garnishments for consumer debt.

Temporary Licensing - Dental and Pharmacy Graduates - [20-59.3](#) – Extends the previous waiver/suspension of legal requirements that allows recent dental, dental hygiene and pharmacy graduates to obtain their temporary licenses and begin working if certain conditions are met. It has been amended from the July 31 extension to include denturists to the list of professional graduates who may obtain their temporary licenses.

## **COVID-19 Activity Continues to Grow in Washington State as Hospitalizations and Deaths Rise**

The Washington State Department of Health (DOH) released the latest [statewide situation report](#), which outlines concerning trends in COVID-19 hospitalizations and deaths, as well as mixed trends in case counts in different parts of the state.

Report findings include:

**COVID-19 transmission continued to grow across the state as of early July.** Best estimates place the reproductive number (the estimated number of new people each COVID-19 patient will infect) above one in eastern and western Washington. The goal is a reproductive number well below one, which would mean the number of people getting COVID-19 is declining. While the estimated reproductive numbers are lower than they were in last week's report, COVID-19 cases are continuing to grow.

- **Case numbers continue to trend upward in many counties, with possible decreases or plateaus in Clark, Franklin, King, Spokane and Yakima counties.** It's difficult to tell at this stage whether these numbers reflect true decreases, or if delays in testing are impacting case counts.
- **The proportion of tests that come back positive is still high in eastern Washington and is rising in western Washington.** This likely means high or increasing case counts reflect greater spread of the virus.

---

### **Washington Listens helps people manage stress and anxiety they may be experiencing because of COVID-19.**

If you or anyone you know is having difficulties managing stress, call the [Washington Listens](#) support line at 1-833-681-0211.
